EUROSPY

AURAL 002

INTRODUCTION

The Eurospy Aural 002 is a high quality digital voice recorder with long working time at full charge (20 hours) in a miniature size device.

It has an 8GB internal memory that allows you to store up to 96 hours of recording. In addition, you can play the recordings not only on a computer connected to USB but you can listen directly from the device through headphones. In addition, you can also delete stored recordings without the need for a computer.

Battery charge

With the switch in the OFF position, connect the recorder using the USB cable to the USB port of your computer, or to an external USB charger.

Audio record

Move the switch to the REC position. The red led comes on for a few seconds, then flashes and goes out. Now you have started recording audio
As you can see, the recorder does not emit any light when it is in recording mode, which makes it more discreet.

Stop recording
When you want to stop / turn off the recorder, turn the power switch to OFF. Now it's completely off.

EUROSPY
NOW YOU CAN CONTROL

Listening the recordings

You can listen to recordings in two ways:

1) With your computer, connecting the recorder to the USB port using the cable included with the recorder. Just connect it to your PC / laptop in the OFF position, and a window will appear on your computer with the folder where you have all the recordings (similar to when you connect a external Flash drive to your computer)

2) Directly from the recorder through headphones. To do this, connect the headphones to the recorder and move the switch to the PLAY position. Press + and it will start playing the first voice file you have stored.
Click + or – buttons to move from one file to another.
To increase and decrease the volume, press and hold + or -.

Erase stored recordings

To delete files you can do it in two ways:

1) From a PC / Laptop connecting the recorder to the USB port (Most recommended option so that you don't make mistakes and delete the wrong files)
2) Directly from the device itself. To do this, when listening to a recording with the headphones , if you want to erase it, press the + and - buttons at the same time while listening to the audio The LED will begin flashing pink indicating that you are about to delete a file. If you agree to erase it, hold down any of the + or - buttons for a few seconds and confirm deletion of that file (blinking blue fast). If you want to erase all the files stored in the recorder, repeat the previous process but, when the pink LED is blinking, keep both + and - buttons pressed and it will confirm the erase of all the files (it will flash in red light colour very fast)

Audio recording while charge

The Aural001 Recorder allows you to make recordings while it is charging the battery, either connected to the USB port of your computer or to an external USB charger.
This allows you to record more hours (up to 96 hours) by not having to depend on the battery's autonomy, since the only limitation would be the memory space.

To do this, first connect the recorder to the USB of your computer or your externa USB charger, move the switch to the REC position and then hold down the + and - buttons at the same time until the red LED light starts blinking and turns off. Now it is recording and charging at the same time.

Features

Record quality   192kbps

Recording format   WAV

Memory type   8Gb build-in

Memory autonomy 96h approx.

Battery   110mAh

Battery work time   About 20 hours

Charging time   2 – 3 hours
